# Walmart

**Saving Money. Selling Better.**

Using Daylighting Technology and Lighting Controls

Walmart Supercenter under construction. Skylight openings in place, steel deck roof and steel trusses ready for white paint. Direct sun hot spots abound similar to the effect found in systems with clear glazings.

Interior painted, skylights installed, and NO ELECTRIC LIGHTS ON. Prismatic skylights produce the highest visible light transmittance with 100% diffusion. Net result, even light without the undesirable hot spots.

Finished store comes to life with the properly diffused and dispersed light from Prismatic Skylights. Today, Walmart has daylighted over 500,000,000 square feet of their stores world wide. Much of the energy Walmart saves in it's stores occurs during peak electric demand hours, thus reducing the need for new power plant construction. Walmart's investment in daylighting to save electricity, over the 20 year life of the store, is less than one cent a kWh. Our partners have supplied more than 2,400 Walmart properties worldwide.

**There's No Greater Efficiency Than Off!™**
